Khamosh Pathak / How-To Geek With a gray background and a couple of links, Safari's start page is quite bland. But it doesn't have to be! You can add more sections and change the background. Here's how to customize the Safari start page on Mac. Safari's customizable start page is available in Safari 14.0 or higher if you are running the latest version of macOS Mojave, Catalina, Big Sur, or higher. How to Customize Safari Start Page Sections The start page in Safari 14 or higher is divided into different sections. In total, there are six sections available to you: Favorites, Frequently Visited, Privacy Report, Siri Suggestions, Reading List, and iCloud Tabs. The "Favorites" section shows two rows of websites and folders that are in your Favorites bar. You can click the "Show More" button to expand the section. As expected, the "Frequently Visited" section shows some of your frequently visited websites. To remove a website from here, right-click and select the "Delete" option. "Privacy Report" shows a rundown of websites that you've visited over the past seven days and reports how many trackers have been blocked from profiling your presence on the web. You can click into the report and view exactly what trackers on each website were blocked. "Siri Suggestions" will show you links that you have received in Messages or in the Mail app. The "Reading List" feature shows the most recent articles from your Reading List. And lastly, the "iCloud Tabs" section shows you open tabs from your other Apple devices. You can enable or disable any section as you wish. You can even disable all sections and only leave a translucent gray background as the start page. Customizing the sections is quite simple. Simply open the Safari app or open a new tab to see the start page. Here, click the Menu button from the bottom-right corner of the screen. Here, select the checkbox next to a section to enable or disable it. Alternatively, you can right-click anywhere on the start page to see quick shortcuts to show or hide a section. How to Change the Safari Start Page Background Once you have customized the sections that you want to see (or rather, hide) on the start page, it's time to customize the background. While the default gray background is minimal, you can spice things up by changing the background image. You can choose from a handful of images that Apple provides, or you can add your own. Click the Menu button from the bottom-right corner of Safari's start page and click the checkbox next to the "Background Image" option to enable the feature. Now, scroll horizontally to see all available background images. Click an image to make it your background. To use your own image as a background, click the "+" button. From the file picker window, navigate to where you have downloaded and stored the image you want to use. Safari will first open the desktop backgrounds folder, making it easy to use any of the built-in wallpapers as the start-page background. Once you have found the image you want to use, select it and click the "Choose" button. Now, the start-page background will be updated. If you want to remove the current background or use another one, go back to the customization menu and click the "X" button next to the current background. Find the text on some websites hard to read? Give your eyes some rest by setting a default zoom level for all websites in Safari for Mac. RELATED: How to Set a Default Zoom Level in Safari for Mac Spotlight does all kinds of great stuff, and OS X Daily points out that there's also an easy way to get a quick look at a web page.OS X's Spotlight is a great tool for finding that file you lost or launching apps, but it can do a...Read more!If you've gone to a web site using Safari, you can simply type the URL into Safari, scroll down to the bookmarks section, and you'll see a live preview of the site. It's a pretty handy way to check in on a site without ever opening up that distraction of a web browser:View Live Webpage Previews in Spotlight on Mac OS X | OS X Daily Traditionally, a homepage is the first website your browser loads when you start it. But by default, Safari on Mac opens up a window of Favorites instead. If you'd like Safari to start with a website of your choice, follow these simple steps. First, open the Safari web browser by clicking its icon in the dock, by using Spotlight Search, or by selecting it from the macOS Applications folder. From there, navigate to the page you'd like to use as your home page. It can be any website you want. In the menu bar at the top of the screen, select Safari > Preferences. In Preferences > General, click the "Set to Current Page" button. This changes your home page to the current website Safari has open. After clicking the button, the address in the "Homepage" field will change to the address of the current page. Next, we'll make it so you see your home page when you open Safari. In Preferences > General, click the drop-down menu beside the "New Windows Open With" listing. In the drop-down menu, select the "Homepage" option. If desired, you can repeat the same step with the "New Tabs Open With" option. In that case, every time you open a new tab, you'll see your home page. RELATED: How to Reopen Closed Tabs and Windows in Safari on a Mac In Apple's Safari web browser, there are several ways to make viewing web pages easier on the eyes. All of them involve adjusting the font size or the zoom level that Safari applies when it loads web page content, which can be helpful if you're using a small screen or a large display set at a high resolution. To increase or decrease the zoom level of both text and images when viewing web pages in Safari, press Command and the + (plus) or - (minus) keys. You can also click on View in Safari's menu bar and select Zoom In or Zoom Out. Alternatively, you can add zoom buttons to Safari's interface: Right-click (or Ctrl-click) on a space in the Safari toolbar and click Customize Toolbar.... Then drag the Zoom buttons in the dropdown to the space you just clicked on the toolbar. Click Done to finish. If you want to keep images at the same size and only adjust web page font size on the fly, press Option-Command and the + or - keys. You can also hold down the Option key and click on View in the Safari menu bar, which changes the Zoom options to Make Text Bigger and Make Text Smaller. Safari will remember your zoom and font size settings until you clear your History. To do so, click Safari in the menu bar, select Clear History..., then click the Clear History button. Set the Zoom Level for a Specific Website Once the zoom level is set up for a particular site, Safari applies it automatically whenever you visit it. Here's how it's done. Navigate to the site that you want to adjust the zoom level for. Right-click on the URL or website name that appears in the address bar, and select Settings for This Website. Alternatively, click Safari in the menu bar and you'll see the same option just below Preferences. Click the Zoom Level percentage and select a new level from the dropdown menu. (Anything greater than 100 zooms in; anything less than 100 zooms out.) Set the Zoom Level for All Web Pages In Safari's menu bar, select Safari -> Preferences.... Click the Websites tab. Click Page Zoom in the General column. Clear any Configured Websites in the list by highlighting them all with your mouse button and then selecting Remove. Click the When visiting other websites pop-up menu and choose a percentage to suit. Set Your Own Zoom Level With a Style Sheet If none of Safari's zoom level increments sit right with your eyes, here's a way to set your own percentage. Open the TextEdit application. Click New Document. In TextEdit's menu bar, select Format -> Make Plain Text. Copy and paste the following CSS code into the file, changing the zoom number to your preferred percentage level:body {zoom: 140%;} In TextEdit's menu bar, select File -> Save.... Name the file safari.zoom.css or whatever you like, just make sure it retains a .css suffix. Choose a location for the file and click Save. Back in Safari, select Safari -> Preferences... in the menu bar. Select the Advanced tab. Click the Style sheet dropdown menu and select Other.... Navigate to the location of your saved CSS file, select it, and click Choose. From now on, Safari will default to the zoom level specified in your style sheet file, which you can edit at any time. Force Websites to Use Bigger Font Sizes Finally, there's an option in Safari that lets you force websites to display text using a minimum font size, without affecting the zoom level. In Safari's menu bar, select Safari -> Preferences.... Select the Accessibility section, check the box next to Never use font sizes smaller than: and select a font size in the dropdown.
